### Controller

#### AbstractActionController

#### FakeFrontendFactory

FakeFrontendFactory enables the use of frontend functionality like cObj-Rendering in the backend. To fake a frontend you just have to call the factory:

```
t3lib_div::makeInstance('Tx_PtExtbase_Utility_FakeFrontendFactory')->createFakeFrontend();
```

## HeaderInclusion

## NameSpace

## Tca

## Utility

## AjaxDispatcher

## eIDDispatcher

## ViewHelpers

### CommentViewHelper

Just removes everything between the tags.

Example:

```
<ptx:comment>
<!--
  Here comes the comment which is never rendered.
-->
</ptx:comment>
```

### RemoveLineBreaksViewHelper

Remove line breaks from the string.

Arguments:

**string:** The string to remove the linebreaks from.

Example

```
{ptx:format.removeLineBreaks(string:'bla')}
```

### ExplodeViewHelper

Explodes a string by the given delimiter.

Arguments:

**delimiter:** The delimiter character

**string:** The string to explode.

Example

```
{ptx:explode(delimiter: ', ', '1,2,3,4')}
```

### Tree / PathViewHelper

Iterates over the path from a given node Id to the root, to draw a path or a rootline menu.

Adds the following variables to the template:

**node:** current node  
**firstNode:** Boolean, true if first node

Arguments:

**repository:** Specifies the node repository  
**namespace:** Specifies the tree namespace  
**node:** The node uid  
**skipRoot:** Skip the root node

Example:

```
<f:for each="(ptx:explode(delimiter: ', ', string:listRow.categoryUid.value.categoryUid))" as="categoryUid">
  <div>
    <ptx:tree.path node="{categoryUid}" skipRoot="1" namespace="tx_ptcertification_domain_model_category" repository="Tx_PtCertification_Domain_Repository_CategoryRepository" >
      <f:if condition="{firstNode}">
        <f:then>{node.label}</f:then>
        <f:else>&raquo; {node.label}</f:else>
      </f:if>
    </ptx:tree.path>
  </div>
</f:for>
```

## Be / FormTokenViewHelper

Just returns a formToken to be used in backend form links

Arguments:

Example:

```
{ptx:be.formToken( )}
```

Returns:

&formToken=<formTokenHash>
